Sauroposeidon proteles is a genus of brachiosaurid sauropod dinosaur. It is only known from four neck vertebrae that were found in South-Eastern Oklahoma. The fossils were discovered in an early Cretaceous period rock layer, a time-span in which sauropods were thought to have greatly diminished...

Sauroposeidon | Dinopedia | Fandom

The name Sauroposeidon is a reference to the Greek god Poseidon, who while usually depicted as a deity of the sea, also held domain over earthquakes. With Sauroposeidon being such a large and heavy dinosaur weighing many tons, it was thought to shake the ground like there was an earthquake when it walked, hence the connection.

Sauroposeidon Proteles A New Sauropod

Sauroposeidon (/ ˌ s ɔːr oʊ p oʊ ˈ s aɪ d ə n / SOR-o-po-SY-dən; meaning "lizard earthquake god", after the Greek god Poseidon) is a genus of sauropod dinosaur known from several incomplete specimens including a bone bed and fossilized trackways that have been found in the American states of Oklahoma, Wyoming, and Texas.

Sauroposeidon Pictures & Facts - The Dinosaur Database

Sauroposeidon is a genus of sauropod dinosaur found in Oklahoma. It is one of the biggest dinosaur yet found. Sauroposeidon lived in what was then a river delta flowing into the Bay of Mexico. It was a plant-eater that probably ate leaves from the tops of trees, perhaps conifers and early flowering trees like magnolias, palms, and sycamores.

SAUROPOSEIDON : DinoChecker dinosaur archive

August 7, 2009. In an email, Vladimir Socha drew my attention to the fact that Tom Holtz's dinosaur encyclopaedia estimates the maximum height of Sauroposeidon as 20 meters plus, and asked whether that was really possible. Here's what Tom actually wrote: "Sauroposeidon was one of the largest of all dinosaurs.

Sauroposeidon - Scientific Lib

A faj neve, a proteles szintén ógörög eredetű, és a jelentése 'a vége előtt tökéletes', ami arra utal, hogy a kréta időszak során a Sauroposeidon volt a legutolsó és legspecializáltabb óriás sauropoda Észak-Amerikában.

Sauroposeidon - Wikipédia

Sauroposeidon ("Ještěři Bůh moří" nebo "Ještěři Poseidon") byl jedním z největších dosud známých dinosaurů, a tím i suchozemských živočichů vůbec. V roce 1994 byly v kraji Atoka v Oklahomě objeveny paleontologem Dr. Richardem Ciffelim obrovské krční obratle, dlouhé až 1,4 metru, patřící tehdy ještě neznámému spodnokřídovému sauropodovi.
